EROSION CONTROL INSTALLATION DETAILS

GENERAL NOTES:

1. Propex geosynthetics shall be attached to a geotextile blanket that is waterproofed prior to installation. The waterproofing shall be of high quality and be applicable for the construction environment.

2. Propex geosynthetics shall be installed over a properly compacted and graded base. The base shall be free of any organic material, debris, or other materials that may affect the performance of the geosynthetic.

3. Propex geosynthetics shall be installed in accordance with the manufacturer's recommendations. The manufacturer's instructions shall be followed closely to ensure proper installation.

4. Propex geosynthetics shall be installed in a manner that ensures a smooth transition from one section to another. This will help to minimize the potential for water infiltration and erosion.

5. Propex geosynthetics shall be installed in accordance with the local building codes and regulations.

EROSION CONTROL INSTALLATION DETAILS:

1. The installation of Propex geosynthetics is designed to provide erosion control and prevent runoff from entering the soil. The geosynthetic material is installed in a manner that ensures a smooth transition from one section to another.

2. The installation of Propex geosynthetics is designed to provide erosion control and prevent runoff from entering the soil. The geosynthetic material is installed in a manner that ensures a smooth transition from one section to another.
