EASY TO INSTALL.
AESTHETICALLY PLEASING.
ENVIRONMENTALLY FRIENDLY.

The PaveDrain® System is a Permeable Articulating Concrete Block/Mat that provides installation ease and flexibility to meet current and future stormwater management regulations. PaveDrain creates performance pavement that integrates the patented arched reservoir to maximize on-site stormwater capacity during extreme storm events.

PaveDrain Highlights:
- 6” block that covers 144 sq. inches & weighs 50 lbs
- Large enough block that is stable without joint filler
- Removes water from the surface at 4,000 in/hr
- Exceed 2 years between maintenance cycles (3-4 yrs is typical)

ADVANTAGES:
- EFFICIENT: flows fast (4,000 inches/hour)
- STRONG: six inch thick blocks nest together, forming a heavy, stable pavement
- DETENTION: built-in arch provides storage for runoff
- PRACTICAL: suitable for any size installation or retrofit
- SAVINGS: reduced life-cycle costs
